*file: Delay Actuator  
A.C. Delay MKII*

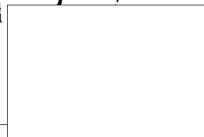

19 November 1958

Dear Joe,

Enclosed are three copies of the Proposal for the Production of the File Destroyers and, in addition, I am sending up three copies of the Final Report on the Mark III Delay and one copy at this time of the Final Report on the Mark II Delay, as it is so bulky.

I also included a sectioned sample of the Mark II Delay which we have just received back from the local plating shop. This item was very badly corroded internally, and as you will see from the present condition, they have done a very nice job of cleaning it by "solvent honing". I believe this method of resurrecting these units will be satisfactory. Naturally, it will be necessary to apply much the same treatment on the outside in order that we can re-lithoform and repaint the units before assembly.

Regard
